Dear Francis,

I enclose a copy of our manuscript. I have made a few minor corrections. I might mention the following

Summary - The phrase .. and the method of derivation.. I believe it ~~is a repetition~~ repetition.

page 3 - I used the same sentence in the C.S.H. MS and it is really unnecessary - it is implied both on page 1 and on the top part of this page

Acknowledgments - I have rewritten the one to Maurice. I think my initial attempt quite bad. If you dislike my effort please try another but in any case I should like to see what you have written.

Concerning the BBC. I still think a talk on the 3rd would be in bad taste. There are still those who think we phoned data and in of the belief that a few enemies are worse than a few enemies. Judging it on a monetary basis (\$100) seems unfortunate

Basically however, you are the one to suffer most from your attempts at self publicity. My main concern is not to be dragged ~~into~~ into it as in 1942 I was in Cambridge. If you need the money that bad, go ahead, but needless to say I shall not think any higher of you and shall have good reason to avoid any further collaboration with you.

I am probably going to be forced into the Armed Forces - possibly with the Public Health Service. I should know in about 2 weeks. Until then, I shall work on bacterial genetics and to a slight extent on R/A.

Please remember me to Edie

Jim
